

HAROLD DURANT

Full-Stack Web Developer

Orlando, FL | MrDurant2023@gmail.com | github.com/ROIEngineer | [My Portfolio](#)

PROFESSIONAL SUMMARY

Full-stack developer specializing in React, Node.js and PostgreSQL with a strong focus on secure API design and scalable architecture. Built and deployed production-ready applications featuring authentication, database indexing, rate limiting, and structured logging. Passionate about system design, clean code, and building maintainable full-stack applications.

TECHNICAL SKILLS

Backend & Databases:	Node.js, Express.js, PostgreSQL (pg), Connection Pooling, RESTful API Design, MVC Architecture
Frontend:	React, TypeScript, Custom Hooks, State Management, Component Architecture, Responsive Design
Languages:	JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3
Security & Performance:	Rate Limiting, Input Validation, XSS Prevention, SQL Injection Prevention, CORS, Database Indexing, Query Optimization
Tools & Deployment:	Git, Vite, npm, Render, Vercel, Postman, Environment Configuration, Structured Logging

TECHNICAL PROJECTS

Portfolio Contact System | *Express.js, PostgreSQL, Resend API, TypeScript*

- Built and deployed RESTful API with PostgreSQL connection pooling and parameterized queries
- Implemented rate limiting, honeypot spam detection, and input sanitization
- Designed indexed database schema (email, created_at) to optimize query performance
- Developed admin API with pagination endpoints and API key authentication

Productivity Suite | *Express.js, PostgreSQL, React, TypeScript*

- Engineered MVC-pattern backend separating routes, controllers, and database layers
- Designed indexed PostgreSQL schema with automatic timestamps and optimized queries
- Implemented full CRUD REST API with proper HTTP status codes and centralized error handling
- Built RESTful API with full CRUD operations, supporting partial updates via COALESCE for flexibility without data loss
- Configured CORS for secure multi-environment deployment

Weather Dashboard | *React, OpenWeatherMap API, Browser APIs*

- Architected custom React hook (useWeather) to centralize API state and error handling
- Integrated browser Geolocation API with graceful fallback logic
- Implemented localStorage persistence layer for user preferences (units, last city)

CORE COMPETENCIES

- **System Design & Architecture:** Designing scalable backend systems with clear separation of concerns, MVC patterns, and modular architecture
- **Database Optimization:** Implementing connection pooling, indexed queries, and parameterized statements for performance and security
- **Security-First Development:** Building secure APIs with rate limiting, input validation, XSS prevention, and SQL injection protection
- **API Design:** Creating RESTful APIs with proper HTTP methods, status codes, error handling, and documentation
- **Production Readiness:** Deploying applications with environment configuration, structured logging, error monitoring, and graceful degradation
- **Code Quality:** Writing maintainable, type-safe code with clear documentation and consistent patterns for long-term scalability

PROFESSIONAL EXPERIENCE

Sales Debt Specialist | *National Debt Relief 2025*

- Analyze client financial data to determine program eligibility
- Operate in high-volume, metrics-driven environment
- Communicate complex financial solutions clearly under pressure

Logistics Account Executive | *Total Quality Logistics 2024*

- Managed time-sensitive client account in fast-paced environment
- Negotiated pricing and handled objections in quota-driven role

Sales Consultant | *Truist Bank 2022-2024*

- Assisted customers with financial products in high-volume call center
- Met performance metrics through consultative client interactions
